(01)What is Gap Analysis and in which areas can it be applied?

Gap Analysis is a technique that requires the business analyst to explore the difference between a current state and a desired future state.

Gap analysis may be used to examine the following areas,

- the competencies held by an individual and those required for a particular role;
- the IT system requirements and the features offered by an off-the-shelf software package
- the ‘as is’ and ‘to be’ business process models

(02) What are the business architecture has three primary objective?

- ❑ To promote organizational health: to ensure the longevity and well being of the organization, generating an ability to be flexible and agile in the delivery of change.
- ❑ To help fulfil unrealized opportunities: promoting appropriate reaction to external influences and proposed initiatives, and identifying the areas of the business which would most benefit from any transformation.
- ❑ To aid organizational performance in a competitive market place: implementing best practice, encouraging reuse, monitoring business metrics and focusing on those areas of the business that deliver the most value to the end customer

(03) What are the examples for the structure of a Business Architecture?

- **capabilities**
